CARE AND CLEANING

Stainless steel is a metal alloy, composed of two major elements which are chrome and nickel. Chrome gives stainless steel its luster and durability while nickel provides hardness and strength.

FOR A PROPER MAINTENANCE, MAKE SURE TO FOLLOW THE CORRECT PROCEDURES WHEN TAKING CARE OF YOUR STAINLESS STEEL SINK:

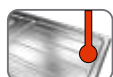

Wash abundantly the kitchen sink after each use with water, mild soap or neutral detergent. Drying is extremely important. Use a smooth cloth to do so;

Do not cut directly on the kitchen surface. Use a specific accessory;

Don't leave sponges, metallic objects, rubber mats, any abrasive materials or substances, cleaning detergents or acids (hydrochloric, sulphuric), nor food remains on the kitchen sink. Prolonged exposition to any of this can cause corrosion;

Do not put warm objects such as pans or trays over the kitchen sink.

IMPORTANT: BE SURE TO CLEAN in the same direction as the grain lines of the finishing.

On some cases, the stainless steel stops performing its functions or loses its features, not for lack of quality, but due to misuse and/or incorrect cleaning and maintenance procedures. Adoption of these correct practices allied to the high quality of the raw material used (18/10 stainless steel) allows RODI to grant a 95 years warranty on all of its stainless steel kitchen sinks solutions.

請按以下程序正确保养不锈钢水槽：

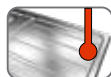

每次用完后，請用充分的水，温和肥皂或中性洗涤剂冲洗水槽。使用软布盡量抹乾水槽。

不要直接在水槽表面切任何东西。如有需要請垫上切菜板。

不要放百洁布、金属物体、橡胶垫、任何粗糙表面的物件或物质，清洁剂或酸性（盐酸或硫酸）在水槽上，不应长食物长时间放水槽上，以上任何物品放长时间都会引起表面腐蚀。

不要把热的物体，如平底锅或托盘放在水槽上。

注意：清洁时务必朝顺着表面纹路方向。

在某些情况下，不锈钢會失去其功能或特性，不是因为质量不好，而是由于误用和/或不正确的清洁维护程序。通过采用这些正确維護高质量（18/10 不锈钢）的做法，RODi 准予所有不锈钢厨房水槽解决方案 95 年的保修。
